Makerspaces!

Furniture that Facilitates Making - Makerspaces and STEAM labs are popping up in schools across the country. NBF has a great product selection for all types of makerspace/STEM classrooms, media centers, science labs, art rooms, etc. If your school is interested in building 21st century classrooms, consider NBF as a great resource. Below are a few tips/suggestions on creating a great makerspace along with product recommendations from one of our top suppliers, Smith Systems.

Keep in Mind

- The overall importance of collaboration
- The designed space should reflect an inclusive and welcoming environment
- Storage is important for projects and supplies
- Tables, chairs, and other furniture in Makerspaces are typically mobile, creating a flexible and accessible environment
- Tables and chairs with adjustable heights and optional casters tend to work best

Plato Mobile Stack Chair - Wide seat pan and lumbar support incorporated into the design, these chairs are ergonomic, offer optimum comfort and minimal back pressure

Double Oval Café Table (with power) - Designed to promote casual, unforced interaction among students in social learning situations.

Cascade Mega Cabinet - Cabinets run from small to large and are available with either tote trays or shelves.

Large Planner Table - Provides ample space to encourage creative thinking and innovation. It is beneficial to have enough room to spread out project materials and work comfortably.
